FANUC Global Service Network

Service First

FANUC Global Service Network

263 locations supporting 108 countries worldwide

FANUC Service Policy

- Reliable
Predictable
Easy to Repair
- lifetime maintenance

FANUC aims to minimise downtime in all factories all over the world

Concept

Connect

Connect various devices across manufacturers and generations.

Monitor

Integrated data visualization, analysis and improvement.

Smart Machine Smart Factory

Drive the machines at site smartly and efficiently to create a smarter factory.

Edge Heavy

Most data are processed in Fog; user-data are stored on-premise.

Open Platform

Develop and sell applications and converters freely.

Control and drive edge equipment with better realtimeness.

Drive

Think with AI to realize smart automation and optimization.

Think

Conceptual Diagram of Connection

FIELD system Manager

License information,
user management
information, etc.

*Only this network requires always-on connection

FIELD system Store

Purchasing and
downloading of
applications and converters

Open Platform

FIELD system

FANUC Intelligent Edge Link & Drive system

Edge Heavy

FANUC's products

Machine tools, Industrial
machines, PLC etc.

Sensors,
Exclusive machines etc.

User data
(on-premise)

User data
(according to
user request)

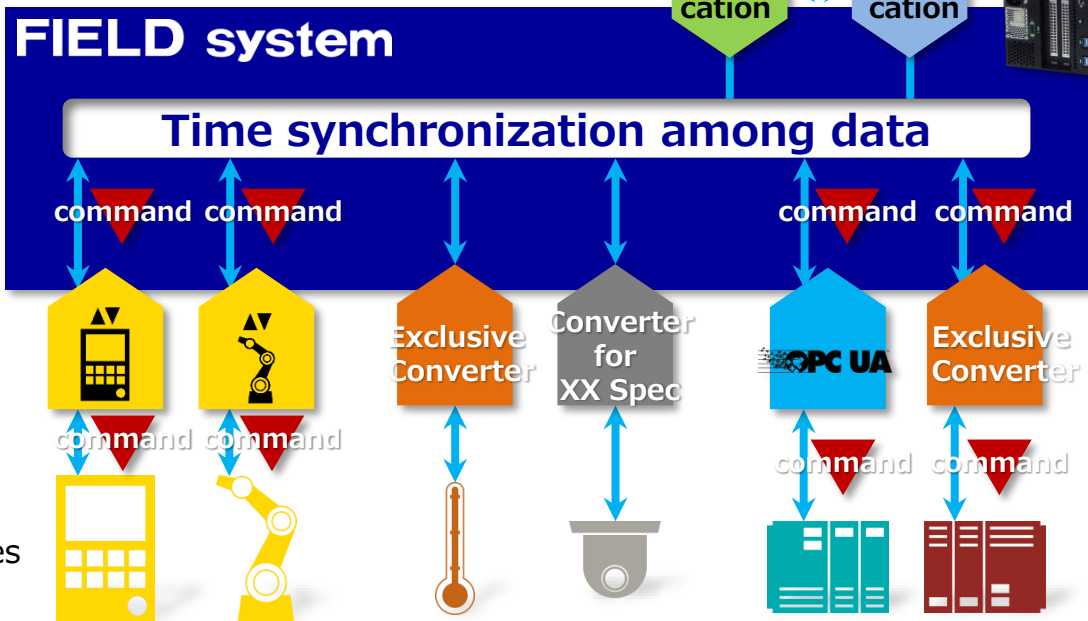

Open Platform SDK (for Application, Converter)

- ✓ Develop applications and communication converters freely
- ✓ Possible to input command or data into edge devices (depending on device specifications)
- ✓ Easy analysis with synchronized time in collected data
- ✓ Linkable between applications

*SDK=Software Development Kit

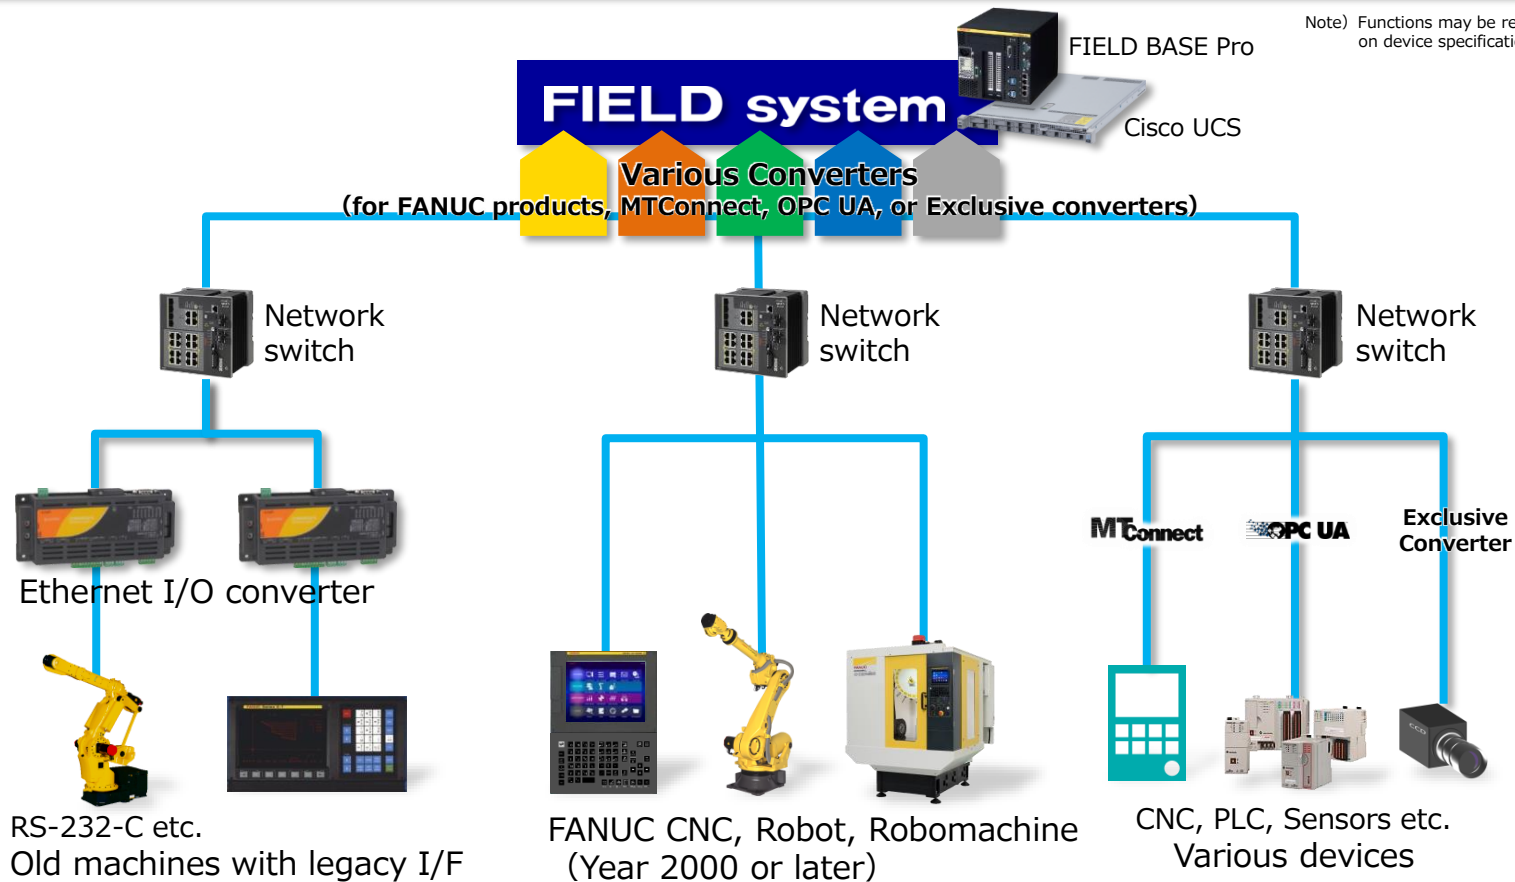

Edge devices

FIELD system Partner 検索

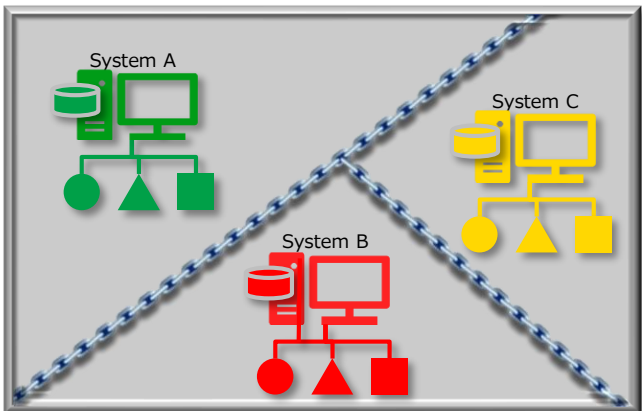

*To get SDK, one should register on FIELD system Partners Web (for free).

Note) Functions may be restricted depending on device specifications

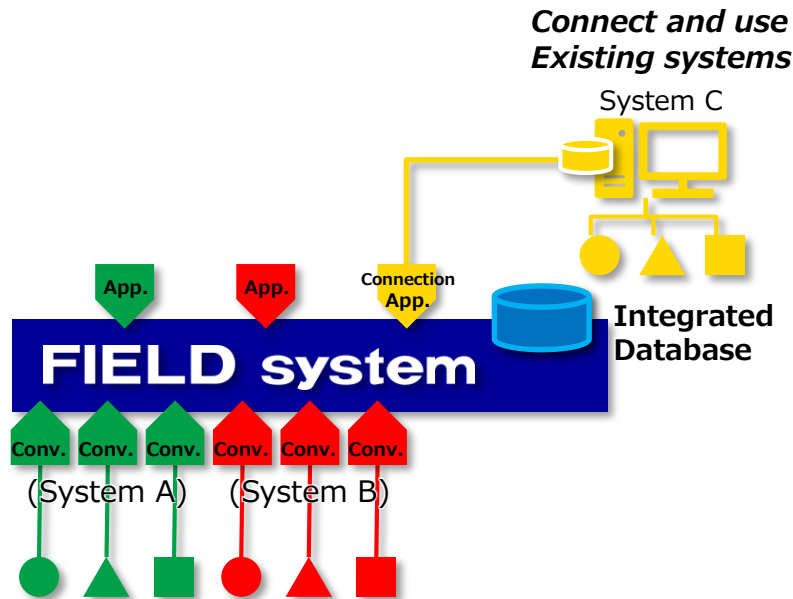

Connectivity Integrate Applications & Systems

Conventional design

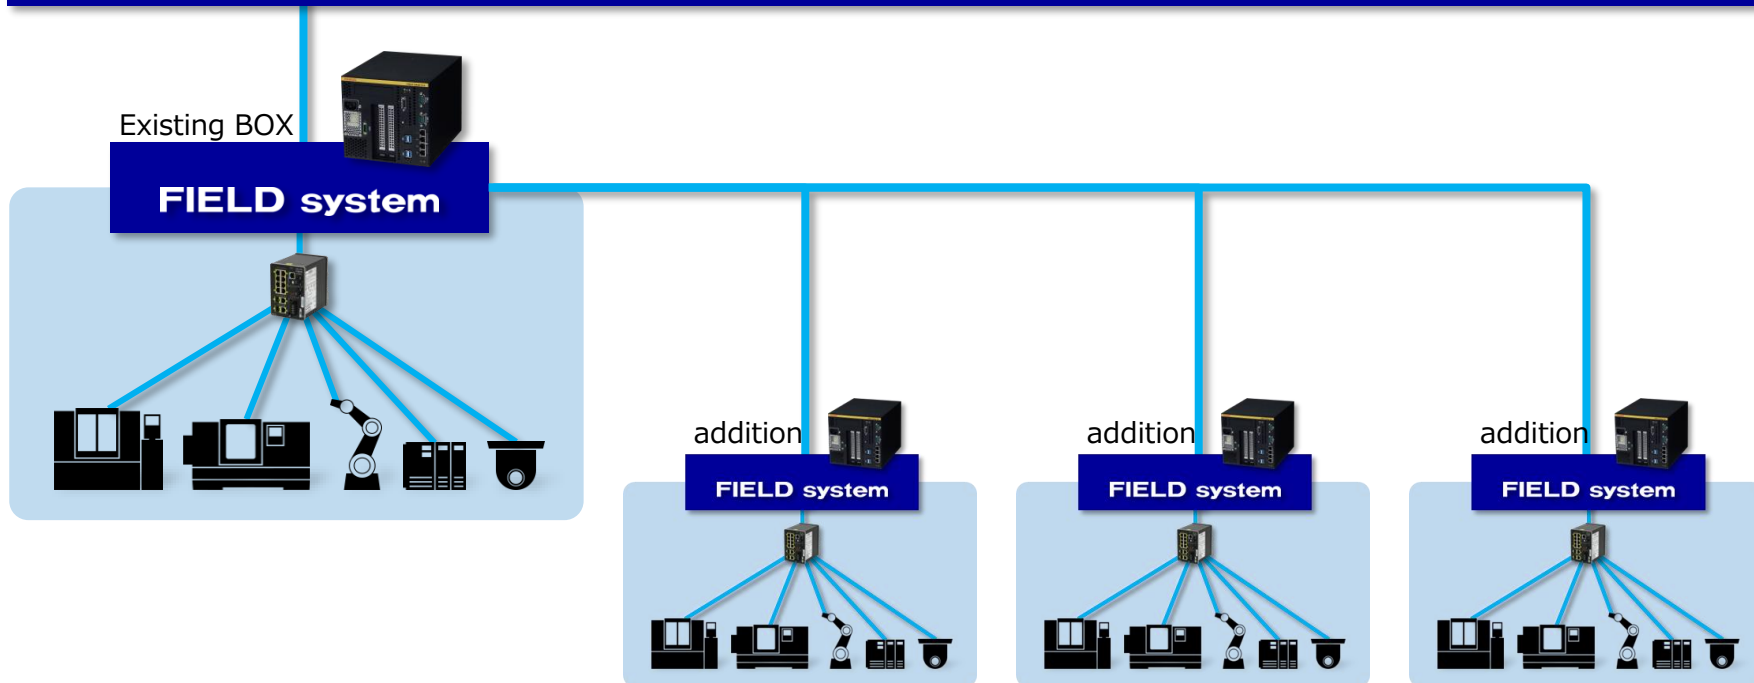

- System is separated by each manufacturer and application.
- Data are collected but not centralized.

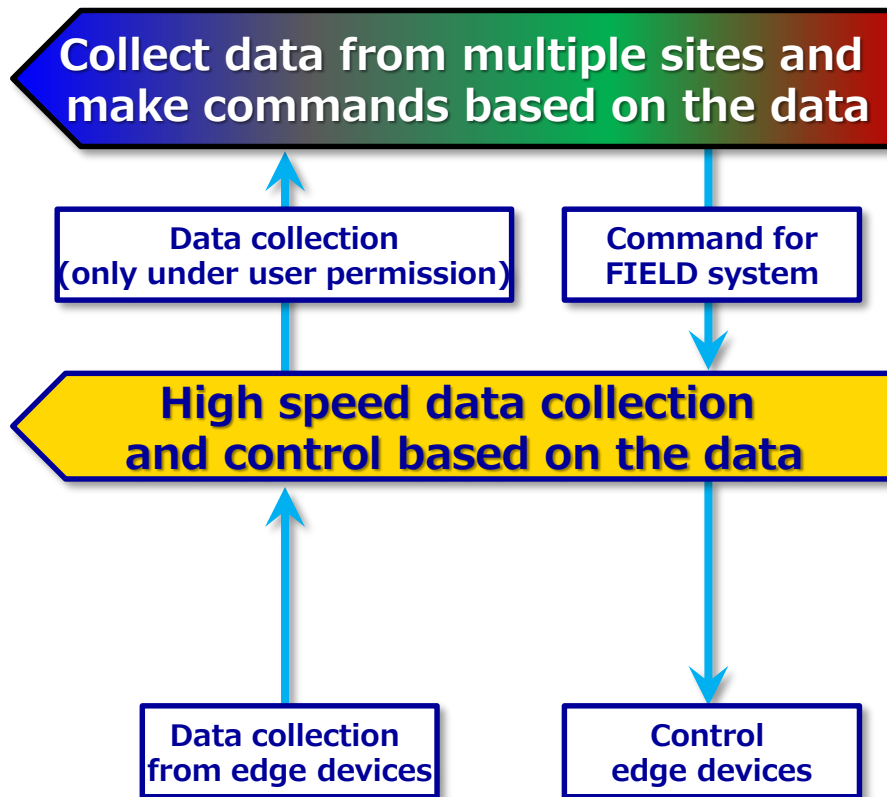

Unify all systems, applications, data in FIELD system

Scale Out of FIELD system BOX

Cooperation between FIELD system BOXes
makes scale out easy when the number of connected devices increases

Connection with Cloud Systems

FIELD system

MAIN APPLICATIONS

Application FIELD system PMA

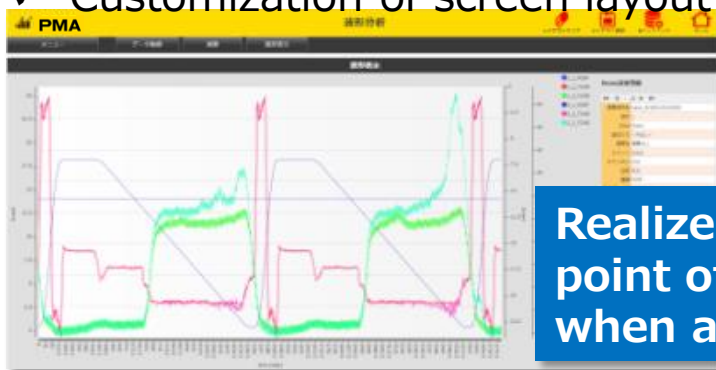

*PMA=Production Monitor & Analysis

Monitor the operation of production equipment anytime

Operation analysis, productivity improvement, factor analysis

- ✓ Information collection from equipment operation
- ✓ Bulk collection of high-speed data such as servo information from inside the controller
- ✓ Time-based analysis by superimposing multiple information
- ✓ Analysis powered by AI and Fourier transform
- ✓ Customization of screen layout and skin (in development)

Realize the visualization of point of change or changes over time when a problem occurs

Application FIELD system ZDT

*ZDT=Zero Down Time

Reduce unexpected downtime of production equipment

Abnormality monitoring, Abnormality alarm, Preventive maintenance, Maintenance support

- ✓ Monitor abnormalities and changes from normal condition of equipment
- ✓ Enable remote maintenance by utilizing collected data
- ✓ Obtain recommendation on alarm/maintenance from Knowledge System

Realize the improvement of quality and efficiency of maintenance service

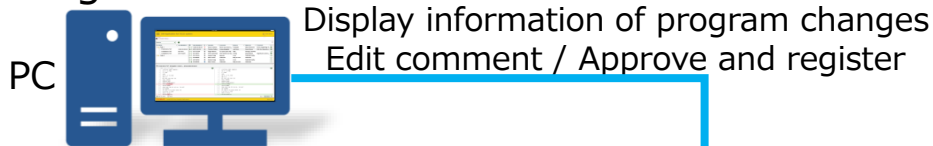

Application FIELD system CNC Edit Log

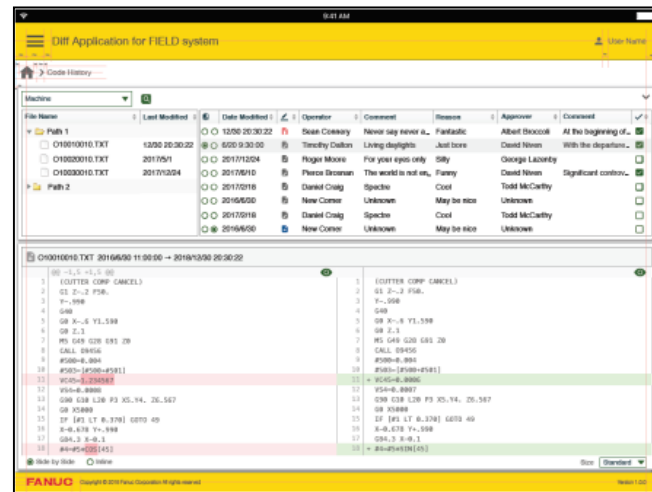

Logging and utilizing CNC program edit history

Identify users, approvers, editing reasons, editing errors

- ✓ Log and display edit history of CNC programs
- ✓ Log edit data such as who edited, what was edited, why, and who approved
- ✓ Identify defect causes resulted from program change

FIELD system

Easy and reliable execution & recording of daily checks

- ✓ Record and display the history of daily check of equipment
- ✓ Check items will be displayed by reading the QR code on equipment
- ✓ Record can be input by selecting, filling-in, or photo-taking, etc.
- ✓ The check results can be confirmed from remote PC

- Confirm check results in the list
- Create check items
- Create QR code

Check→Upload the check results

Application FIELD system Authentication

Enhance security by personal authentication by user

Provide appropriate operation environment according to authority

(*for machine tools with FANUC CNC with Ethernet)

- ✓ Personal authentication by CNC
- ✓ Operation restriction according to user authority
- ✓ Unified management of operator information
- ✓ Operation history is periodically acquired and can be referred

Application screen sample

- Display by Operator ID
- Reference of operation history

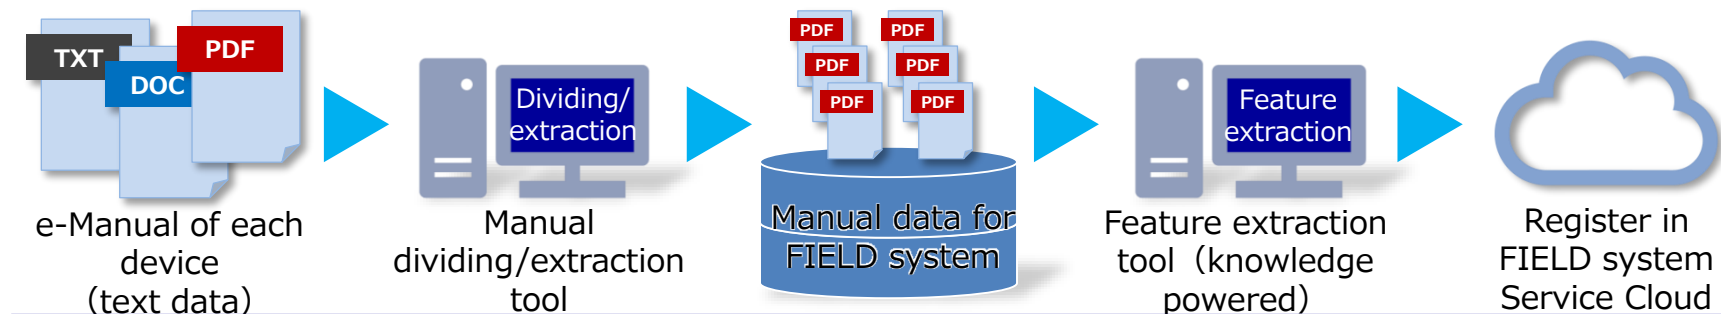

FIELD system Authentication Application

AI Manual Reference

Scheme to search manuals of machines from different companies in natural language

FIELD system Service Cloud  **Manual Reference App.**
(supports natural language)

X軸テレスコピックカバー

(a) (Xカバー-R, Xカバー-L) (a-T14IB, T14IBL)

Sample of application search screen

Only user's machines can be selected

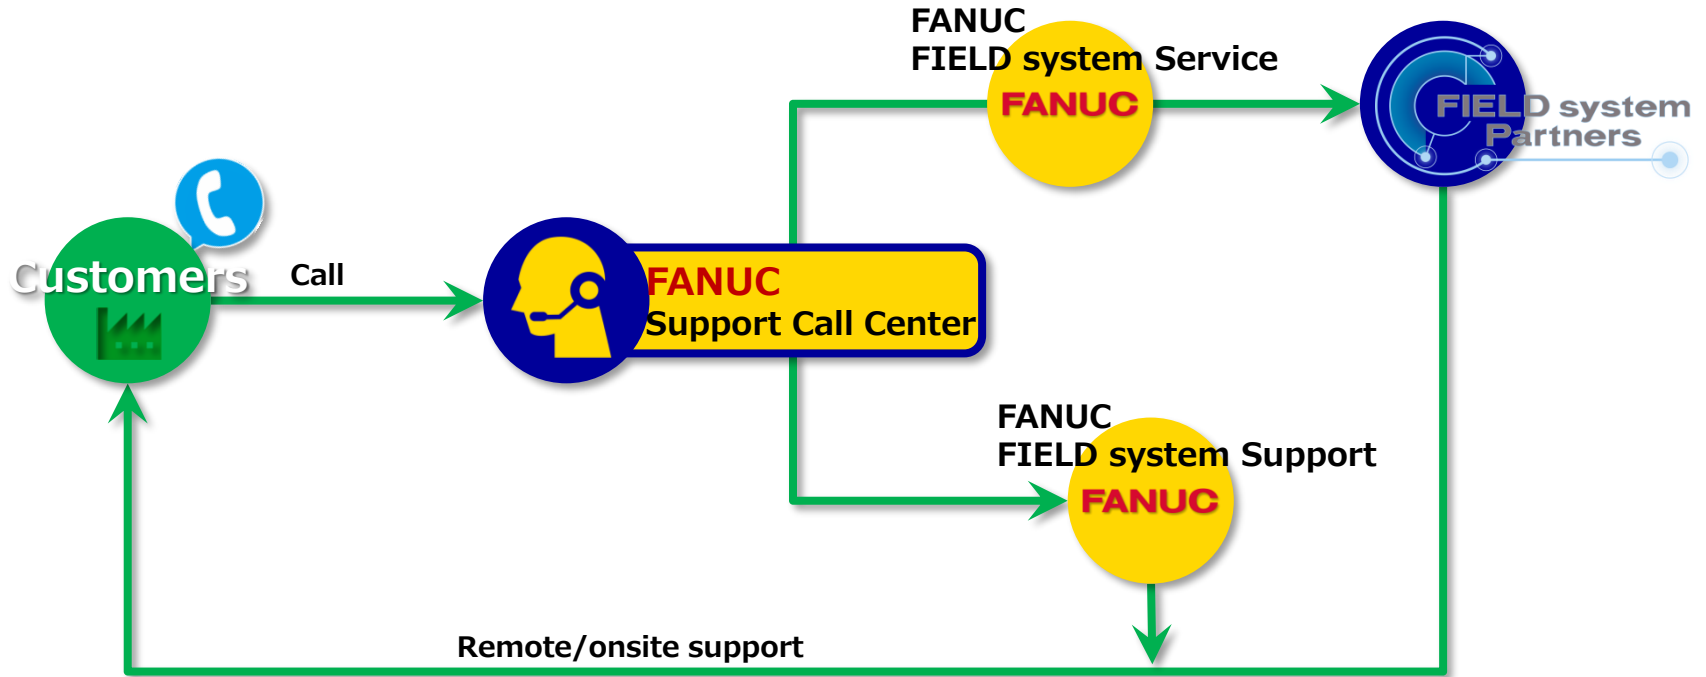

Supports natural language

- ✓ Realize digitalization easily by using FIELD system infrastructure
- ✓ Increase user's merit by utilizing exclusive tool to register data

Refer to the details in PDF

App & Converter Developers – EMO Partners

The following is a list of App Developers who are present at FANUC Booth during EMO:

- | | |
|------------------------------------|-----------------|
| 1. AI Smart (Germany) | 11.Senseye (UK) |
| 2. ALASCOM (Italy) | 12.SKf (Sweden) |
| 3. IGUS (Germany) | |
| 4. Kogifi (Poland) | |
| 5. Marposs (Italy, Germany, Japan) | |
| 6. Mitutoyo (Japan, Germany) | |
| 7. OPEN DATA (Italy) | |
| 8. Ruhrbotics (Germany) | |
| 9. SAUTER (Germany) | |
| 10.Schmalz (Germany) | |

Applications made on FIELD system @ EMO 2019 (1-6)

- 1. Fieldview App by company AISMART – to automate quality assurance checks, inventory management and assembly processes with computer vision;**
- 2. APM (Advanced Plant Monitoring) App by company ALASCOM - Advanced solutions and artificial intelligence for automation;**
- 3. Igus smart plastics App by IGUS – for zero downtime;**
- 4. AIDAR Digital App by KOGIFI – for Industry 4.0;**
- 5. ARTIS C-DASHBOARD App by company MARPOSS - for optimizing your manufacturing turn monitoring data into actionable information;**
- 6. Connection for measuring instruments (Converter) by MITUTOYO - state-of-the-art Metrology Instruments & Software seamlessly connecting all worlds;**

Applications made on FIELD system @ EMO 2019 (7-12)

- 7. OPERA PREDICTIVE App by company OPEN DATA - Intelligent MES Apps Connect, Monitor, Analyze, Predict;**
- 8. OPERA SMART OEE App by company OPEN DATA;**
- 9. Converter FT-AXIA by company RUHRBOTICS - We connect you to FIELD system with FIELD system converters;**
- 10. SAUTER IQ-Turret Environment App by company Sauter Feinmechanik GmbH – for turret condition monitoring;**
- 11. The Energy and Process control App by company SCHMALZ**
- 12. Senseye PdM App by company SENSEYE - the Predictive Maintenance solution to achieve Industry 4.0 best practices;**
- 13. Multilog On-line surveillance device App by company SKF - Predicting spindle health performance using IMx8 with SKF edge solution.**

FIELD system Partners presenting at their booths at EMO 2019

1. **Biglia (Italy)**
2. **DMG-MORI (Japan-Germany)**
3. **Marposs (Germany)**
4. **MATSUURA (Japan)**
5. **Mitutoyo (Japan)**
6. **RAIS (Bulgaria)**
7. **SAUTER (Germany)**
8. **TSUGAMI (Japan)**

Thank you
